CDI Applicant Reservation System CDI-CTMC-ARS

The CDI applicant reservation system provides a highly automated solution to applicant live scan reservations, biographical data entry, and billing. This system consists of a web site, a store and forward system, and a billing report system.

The applicant goes to a web site and enters the biographical information for the record and selects an available appointment time. After the customer submits the final reservation the information is saved on a store and forward server.

When the customer goes in the live scan queries the store and forward for the applicant biographical information. After the live scan process is complete the live scan submits the record to the store and forward which then submits the record to the configured AFIS. This information is retained on the store and forward to facilitate subsequent billing reports.

CDI Applicant Reservation System BENEFITS

- Provides an automated process for applicant live scan scheduling.
 - Live Scan Location with Maps
 - Date and Time
- Reduces live scan operator time per applicant by having the applicant enter the biographic information themselves.
- Provides billing information to agency financial system for automated billing
- Implements single point of data entry
- Web site data is hosted to the live scan device when applicants show up

MAIN FEATURES

- A web interface for applicants to use for pre populating demographic information and selecting an available appointment time.
- A store and forward system that feeds the demographic information to the live-scans as needed and tracks the appointments and corresponding live scan submissions.
- A billing report system.
