CDI Mobile Question of Identity System

CDI Mobile Question of Identity System

- Real-time mobile identification
- Transactions using standard NIST/EFTS
- Text, SRE, XML and HTML responses
- Supports various commercially available mobile devices, including Crossmatch, Daptech, Motorola, Amrel, Intermec and DataStrip
- Local fingerprint database for identification of most wanted or watchlist individuals
- GSM/GPRS, CDMA/EVDO, Bluetooth, 802.11 and other proprietary communication options
- Quick and intuitive GUI minimizes training and adoption

MAIN FEATURES

- Quick ID enabled for rapid identification
- On-device fingerprint identification and verification
- Biometric Logon to secure the device
- Completely NIST/EFTS compliant
- No intervening server required, can communicate directly to existing AFIS
- Supports various integration scenarios for maximum information to officers in the field
- A Live Scan in the palm of your hands 1-10 fingerprint capture capability
- Transaction queuing/management does not require the officer to wait for a response before creating another transaction
- Supports GPS integration for more advanced tracking

The CDI Mobile QUID System gives law enforcement officers the ability to quickly and accurately verify the identity of subjects in the field. CDI designed the CDI Mobile QUID Client to take advantage of the technical capabilities and versatility offered by the Microsoft .NET Framework. As a result, CDI is able to offer the CDI Mobile Client on a wide range of platforms, including the Daptech CE3240, TTI ST4ex, DataStrip DSVIIsc and CrossMatch Be.U. As a result, the CDI Mobile QUID Client can fully utilize the specific features of each hardware platform, such as network interfaces, fingerprint readers, cameras, barcode readers, smartcard readers, magnetic stripe   readers and GPS devices, and integrate them into any agency workflow. The CDI Mobile ID Client can use any wireless network communications protocol supported by the host Device, including GSM/GPRS, CDMA/EVDO, Bluetooth,802.11 and others. The CDI Mobile Client   supports most common   application protocols, including FTP, SMTP, HTTP and HTTPS.
