CDI Live Scan and Document Archive
CDI-CTMC-ARC

CDI Live Scan and Document Archive Benefits

- Permanent write-once optical storage for all types of electronic media and evidence
- Configurable document indexing for ease of searching (i.e. Booking number, person number, date of birth, date of arrest, name, etc)
- Complete document management options available, including high-quality document scanning with deskewing, despeckling, workflow and review processing
- Supports Record Deleting, Sealing and digital watermarks
- Record annotations

CDI Live Scan and Document Archive System provides online access to all NIST/EFTS and scanned documents generated throughout the law enforcement process. All data is indexed based on the customer requirements and stored on write-once optical media, such as Magneto-Optical or Blu-Ray disk, for permanent storage. These optical storage solutions allow for expandable, low cost storage for dozens of terabytes of NIST/EFTS transactions, TIFF's, PDF's, JPG's or any other digital media. Access to these Records is facilitated through an easy to use, browser-based GUI which allows users to access information from anywhere on the network. In the event of hardware failure, all data is protected on removable optical media, minimizing recovery time even in the event of disaster. Online access to these archived records is possible through the use of high-speed robotic changes and state-of-the art optical drives for virtually instantaneous access to all documents.

MAIN FEATURES

- On-line access to archived documents
- Inexpensive, write-once optical storage
- Configurable indexing
- No electronic format limitations
- Intuitive, menu-driven, browser-based GUI
- Supports millions of documents and multiple terabytes of expandable storage
- Low power consumption and small computer room footprint
